

Department Name	Retirement and Stabilization
-----------------	------------------------------

The New York State and Local Retirement System Contribution Stabilization Program is an optional program that establishes a graded contribution rate system. If governments elect to participate, it enables them to pay a portion of annual contributions over time, leading to smoother, more predictable pension costs.

In contrast to the normal annual retirement contribution, as the Retirement System's average rates rise, the County's annual contribution under the Stabilization Program would be less than the normal contribution, since the graded rate increase is capped at one percent. When the System's average rates begin to decline, the graded rates will decline in one percent increments. Therefore, it will be possible for the System's average rates to be lower than the graded rates. In such instances, the County will pay the graded rate. Any additional contributions will first be used to pay off existing amortizations. If all amortizations have been paid, any excess will be deposited into a reserve account and will be used to offset future increases in contribution rates.

As can be seen in the chart above, our retirement system contributions are highly variable from year to year. Between 2009 and 2014 our retirement system obligation increased three-fold and now has seeing moderate decreases due to our actions to pay off previously amortized amounts as well as market gains on the underlying investments. According to recent trends, Albany County's pension obligation for 2026 is a projected total of \$28,765,561, of which we are planning on paying the full amount without amortization for an out of pocket expense of \$28,765,561. In recent years Albany County has also paid down the full amortization liability, from a high of over \$34 Million.
